

Build a Guitar cabinet

Space saving - accomodates 5-7 guitars and 10u of rack devices

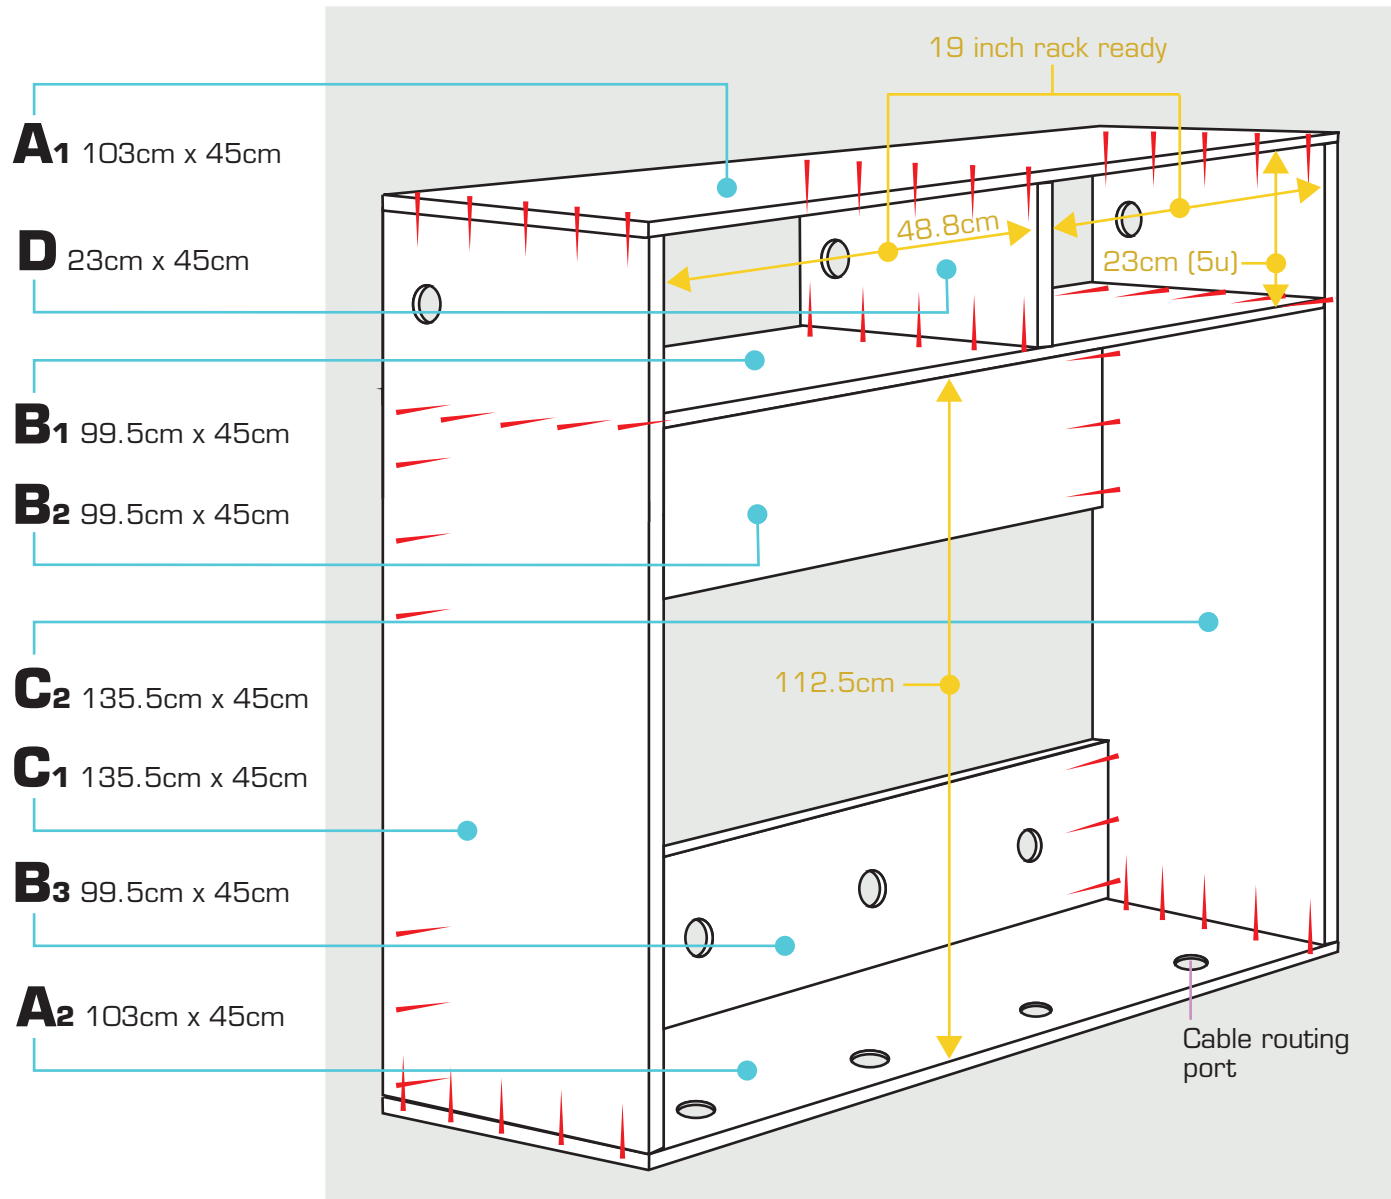

Use 18mm thick MDF throughout.

Finish with clear varnish.

Requires 4 x 5u 19" rackstrip.

Add 6 castors for mobility.

You may wish to support B1 from beneath with a centrally located steel right angle.

— Assemble using 50mm screws. Pre-drill and countersink all screw holes to prevent splitting. Use a drill bit dimension a little narrower than your screw. Drill a test hole in an offcut.
